# HEWI Professional Care

## Accessibility experts

Hospitals, care homes and retirement homes have a real need for simple solutions for complex requirements. HEWI's individual optimum planning, design and implementation approach makes this possible without any compromises.

Decades of experience, reliable innovation, an understanding for design and materials, and people-focused product development have made us what we are today: experts in accessible bathrooms. As the global market leader, HEWI sets standards in the professional care field, in bathrooms in hospitals or senior living and other care facilities.

HEWI underscores its commitment to safety and comfort with attention to design, color and finish options as well as a full range of accessories, thereby allowing designers to compliment and contrast with other finish elements in bathroom design plans. The seven color pallet in Range 477/801 and the two metal finishes in System 900 provide a wide range of options to meet all design schemes.

Multiple choices for components, such as waste bins and soap dispensers, can answer the needs of bathrooms for individual, independent users, or bathrooms in public spaces that are highly frequented. The same dedication to easy cleaning, water resistant attachments, design and hidden fasteners is applied to bathroom accessories. HEWI is always the ideal choice.

HEWI makes it easy to create inclusive designs. Our products are perfect for meeting the complex requirements of the professional care field; they are designed down to the smallest detail. The system stands out thanks to its functionality, durable quality, sophisticated design, clever mounting methods, hygienic surfaces and convenient and safe usability.

Premium materials and careful workmanship result in outstanding, durable quality. Even after years of intensive use and cleaning, high-quality products show absolutely no signs of wear.

# Design and function

## System 900

System 900 can be used to realize bathrooms that convey a sense of well-being. The system's design affords a hotel-like level of comfort. The elegant design of the products, the use of high-quality materials and the clever functions enhance user well-being. The system was specifically developed to offer the best possible levels of patient independence and safety.

A timeless, minimalist design has been created using durable materials, such as high-gloss chrome or satin stainless steel. The pore-free surface is resistant to cleaning agents and disinfectants. The modular structure of System 900 allows for various combination options. System 900 enables bathrooms to be created that are ideally designed to not only meet users' needs but also the needs of care give's and facilities. The product functions are perfectly matched to the professional care field. System 900 includes a wide range of ADA compliant products. This fact greatly simplifies the planning of accessible bathrooms. Grab bars and shower seats were engineered to meet ADA standards. The shower seats can be loaded up to 450 lb (204 kg). System 900 is suitable for facilities where access and use should also be provided for individuals with disabilities.

# Comfortable and convenient use

## Combining safety and style

.....

- Up to 450 lbs (204 kg) load capacity

.....

- Different sizes and designs

- Easy to clean
- Non-porous surface, increased hygiene

- Focus on design
- Generously sized seat increases comfort and safety

- High quality material
- Secure hold and support for users

## Durable quality

### Hygienic materials

Grab bar

Accessories

Permanent, reliable quality is not just evident in the materials but also in the technical details.

Hygiene is a decisive factor in the professional care field. System 900 only uses materials that are resistant to disinfectants and cleaning agents. The products are made of as few components as possible so that only very few joints are created. The interfaces are extremely precise due to the use of laser technology. Precise production guarantees smooth, hygienic surfaces. To find out more, visit [www.hewi.us/hygienic](http://www.hewi.us/hygienic) and watch the film there.

The railing system and shower handrails stand out thanks to a clever and very simple mounting technique. With the innovative plug-click principle, only three rosette mounts are required instead of the usual four fixing points. This makes the support bar systems easier to clean.

The sealing element can be used quickly and reliably to seal the attachment elements to the wall. It can also be used with the wall brackets for the hinged support rails and shower seats, and the rosette mounts of the support rails and grab bar components.

Watch the film at [www.hewi.us/installation](http://www.hewi.us/installation) to find out how easy it is to mount parts with the plug-click connection.

Shower rail

## Providing flexible use Smart solutions

- Few components make cleaning easier and increase hygiene
- Only premium materials

- Extreme stability due to additional stiffening increases safety

· Maintenance-free brake controls the lowering of the hinged support rail and minimizes the risk of injury

Bathrooms can be adapted flexibly to the needs of users thanks to the use of mobile hinged support rails. The installation film at [www.hewi.us/flexible](http://www.hewi.us/flexible) shows how simple it is to install the mobile solutions.

# Achieving inclusive design

## Range 477/801

Range 477/801 reflects all the experience HEWI has in accessible design. Range 477/801 was the first accessibility sanitary range for the German market and, since then, it has represented the quality of products made in Germany. The range is continuously developed and has established itself as both classic and up to date.

The HEWI product diversity enables the comprehensive design of bathrooms, oriented to the varying needs of patients and care personnel. Range 477/801 is designed to offer the best possible levels of patient independence and safety. This greatly alleviates pressure on care givers. Cleaning staff profit from the hygienic and easy-to-clean surfaces.

The polyamide range is characterized by its pleasant touch. The cross-section of the round tubular design is optimally matched to the hand. Range 477/801 is available in seven HEWI colors and thus enables many design options. Products are available in the HEWI colors pure white (99), stone gray (95), anthracite gray (92), jet black (90), ruby red (33), sand (86) and umber (84).

## Function and safety

### Grab bars and shower seats

Grab bar

Shower rail

Safety and independence are important aspects of accessibility. HEWI products provide reliable, secure hold and support to users. HEWI offers more than pure functionality, it also attaches great importance to the comfort and aesthetic design.

HEWI products have been setting new standards in the area of accessibility for decades. Product functionality is designed and developed in line with the principles of Universal Design theory and to provide solutions to meet ADA guidelines. HEWI offers ADA-compliant shower seats and support systems, such as grab bars with optional movable hand-held shower holders.

HEWI hinged shower seats illustrate this integrated approach. The generously sized seat design increases both comfort and safety in the shower. HEWI shower seats are made of high-quality polyamide. The slip-proof surface has a pleasant, warm feel and is easy to clean. The non-porous surface increases hygiene. The louvered structure enables water to flow away quickly.

Continuous, galvanized steel cores and wall plates with integrated steel elements increase stability and give the shower seat its high weight capacity. If the seat is not needed, it can be folded up against the wall. HEWI shower seats are available in different sizes and shapes so that they fit in any shower.

## Secure support Pleasant grip

### EASY INSTALLATION

- Permanently reliable fastening
  - Fixing roses are made of corrosion-proof steel
  - Fixing technology enables corrections
  - Self-latching roses made of high-quality polyamide conceal the fixing
- 

### HANDLING COMFORT

- The cross-section is perfectly shaped for the human hand
- Round tube design offers a pleasant and secure hold

### HYGIENIC SURFACE

- Minimal number of components,
- Easy-care, cleaning agent-resistant materials
- Pore-free surfaces
- Concealed fixing

**DESIGN OPTIONS**

- Available in seven select HEWI colours
- High-contrast design nor subtle tone-on-tone colouring

**CUSTOM-FIT**

- Large selection allows the optimal matching solution

**RELIABLE**

- The steel core inside the cloakroom rail increases its load capacity
- High-quality polyamide guarantees permanently high-gloss surfaces

# Easy grip

## System 800 K | Support rails

Support rails provide safety and support in all areas of the sanitary room – whether at the washbasin, the toilet or in the shower. The System 800 K support rails allow simple, easy and, above all, flexible use. Easy to grip surfaces and a cross-section that is adapted to the hand, enable dynamic gripping and effective force transfer. The tubular design of System 800 K allows a positive locking grip which means that when the body is supported, the load is distributed evenly across the fingers, palms and joints.

The three-point attachment guarantees safe and permanently reliable installation. The fixing roses are made of corrosion-proof steel. The innovative fixing technology enables corrections, so that grab bar can be installed exactly. Self-latching roses made of high-quality polyamide conceal the fixing. Thanks to the extremely small gap, dirt cannot collect between the wall and handle. This increases hygiene significantly. In addition to hygienic benefits, the support rails offer the opportunity to implement the ADA requirements in compliance with the norm.

The System 800 K support rails are available in selected HEWI colours.

For more information about the support rails, please refer to our online catalogue at [www.hewi.us/grab-bars](http://www.hewi.us/grab-bars).
