## 1 General notes

### 1.1 Preliminary remarks

These assembly instructions are applicable for timber and PVC profiles. Even if solely PVC profiles are shown in the following assembly steps, the procedures described applies equally to timber profiles.

### 1.2 Target group of this documentation

This documentation is addressed exclusively to specialist companies. All work described in this document is to be performed by experienced professionals with training and practice in the assembly, installation and maintenance of PORTAL hardware as the safe and professional assembly of the PORTAL hardware is not possible without the relevant expertise. Keep these assembly instructions in a safe place.

### 1.3 Intended use

- The PSK 200-Z comfort parallel slide & tilt hardware is intended for use in windows or patio doors with timber or PVC profiles.
- The sash weight is max. 200 kg.
- The PSK 200-Z comfort is intended for use in permanent buildings.
- The PSK 200-Z comfort allows the horizontal opening and closing of windows and patio doors from profiles for parallel slide & tilt elements.
- The parallel slide & tilt elements must be installed vertically, in no circumstances in a sloping position.

### 1.4 Improper use

- The hardware components described in these assembly instructions are manufactured from steel, zinc plated and then treated with a special process.
- They are not suitable for use:
  - in wet rooms
  - in environments with aggressive, corrosive air
  - in environments with saline air
- Please contact your SIEGENIA sales consultant in such cases

### 1.5 Safety notes

- Maintenance must be carried out on the PSK 200-Z comfort at least once a year.  
See PORTAL maintenance instructions.
- Furthermore, for the PSK 200-Z comfort, the specifications provided by the profile manufacturers or system owners must also be adhered to with regard to possible restrictions on sash dimensions, sash weights and locking distances.
- Where special manufacturing instructions or fabrication guidelines exist, these must be adhered to.
- The specifications given for torques must be adhered to.
- Your complete set of hardware should solely be composed of SIEGENIA hardware components. Otherwise functional disorders and damage could occur, for which we accept no liability.
- If special safety aspects must be observed (e.g. for installation in schools, nurseries, hotels, etc.) we recommend the installation of a lockable handle or the use of the PS 200 comfort.
- All hardware components must be properly assembled as per the description on pages "Assembly" PSK hardware components and "Adjustment".
- PSK 200-Z comfort elements may only be surface treated before the hardware components are assembled. Subsequent surface treatment can limit the functioning capability of the hardware components. In such cases we are not obliged to honour any warranty.
- When block setting, please observe technical guideline no. 3 from the German Glazing Trade [Glaserhandwerk], "Blocking glazing units" [Klotzung von Verglasungseinheiten].
- Never use acid curing sealants as they may cause corrosion in the hardware components.
- Never use acidic lubricants and cleaning agents in the vicinity of the guiding rail/the slider.
- Keep the track of the running rail and all rebates free from dirt and debris, especially from deposits of cement and plaster. Avoid exposing the hardware directly to water and do not let cleaning agents come into contact with the hardware.

- We recommend cleaning the surfaces with a mild, pH neutral detergent solution in warm water. This will remove most contamination. After cleaning, always rinse the surface of the PVC profile with clear water.

## 1.6 Guidelines of the German Association of Quality for Locks and Hardware (in German Richtlinien der Gütegemeinschaft Schlosser und Beschläge e. V.)

You will find everything worth knowing about the proper use and maintenance of hardware for windows and patio doors in the "Guidelines of the German Association of Quality for Locks and Hardware (in German Richtlinien der Gütegemeinschaft Schlosser und Beschläge e. V.)

We prescribe the mandatory observation of these guidelines.

You can find the latest versions of the directives, in a range of languages here:

<http://www.beschlagindustrie.de/ggsb/richtlinien.asp>

**VHBH – Hardware for windows and patio doors**  
Guidelines/notes on the product and on liability

**VHBH – Hardware for windows and patio doors**  
Specifications and notes for end users

## 1.7 Help and support

You will find further information on adjustment or processing possibilities under the following QR code.

The QR code sticker can also be found on components of the PSK element. Especially on the inside of the bogie wheels cover caps.

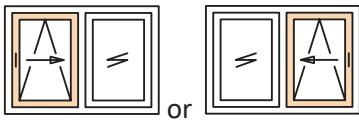

## 1.8 Dimensions

All specified dimensions are nominal dimensions and include the general tolerances (formerly „free size tolerances“). All nominal dimensions are defined in mm.

## 1.9 Scheme overview

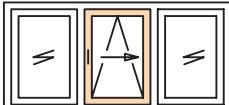

Scheme A

DIN LH                    DIN RH

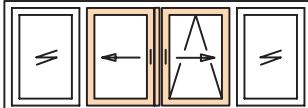

Scheme A with 1 sliding sash/1 fixed sash\*

Scheme G

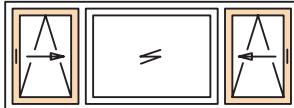

Scheme G with 1 sliding sash/2 fixed sashes\*

Scheme C

Scheme C with 2 sliding sashes/2 fixed sashes\*

Scheme K

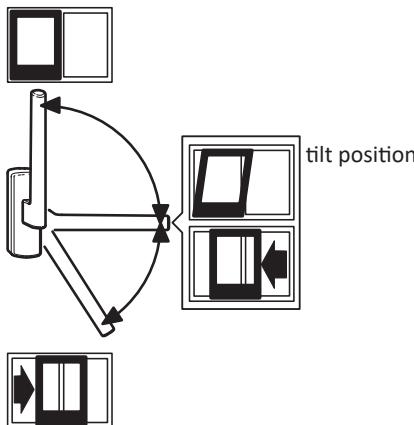

Scheme K with 2 sliding sashes/1 fixed sash\*

\* Turning sashes instead of the fixed sash are also possible. Turning sashes with rose inside only and removable handle (see handle catalogue).

## 1.10 Operating sequence:

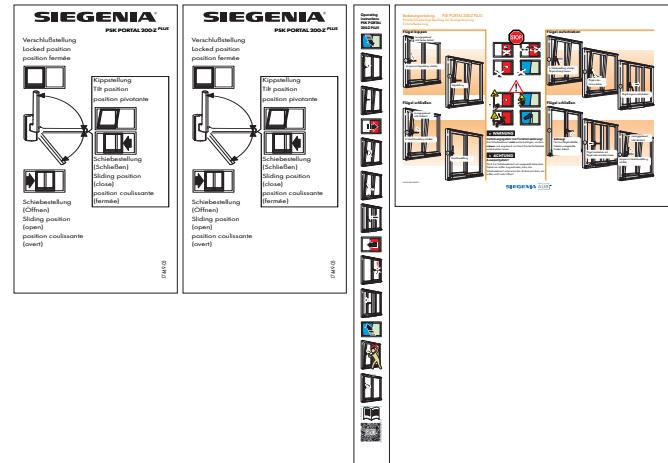

locking position

## 1.11 Operating sticker

Attach the operating sticker (slide direction DIN LH or DIN RH) in a visible position on the installed parallel slide & tilt sash.

The operating sticker is enclosed in the carton

### ATTENTION:

primary and secondary sashes must be labelled accordingly to prevent mishandling.

The sliding sashes may be operated only in the order specified below!

### Opening:

primary sash first **1.** then secondary sash **2.**

### Closing:

secondary sash first **2.** then primary sash **1.**

## 2 Fabrication guidelines

### 2.1 Size ranges

Scheme version		A	C
Sash rebate width (FFB)	Sliding sash	740 - 2000	740 - 2000
Sash rebate height (FFH)	Sliding sash	1000 - 2360	1000 - 2360
Frame to sash clearance			125
Sash weight	with 2 bogie wheels	max. 160 kg	
	with 4 bogie wheels	max. 200 kg	

Ratio sash height (FH) / sash width (FB) < 2.5 : 1

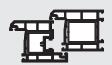

- SIEGENIA-Construction drawings PVC profiles:
  - PSK 200-Z comfort
    - scheme A
    - scheme C
    - scheme G
    - scheme K
- The size ranges specified above must not be exceeded.
- In addition, with regard to the SIEGENIA hardware PSK 200-Z comfort, the specifications of the profile manufacturers or system owners also apply, especially with regard to possible restrictions on sash dimensions, sash weight and locking distance.
- Where special manufacturing instructions or fabrication guidelines exist, these must be explicitly adhered to.
- See the construction drawing for the respective profile system for further details.
- Screw heads must not project into the functional area of components. This can lead to material damage and loss of function.

### 2.2 Abbreviations

The following abbreviations are used in these assembly instructions:

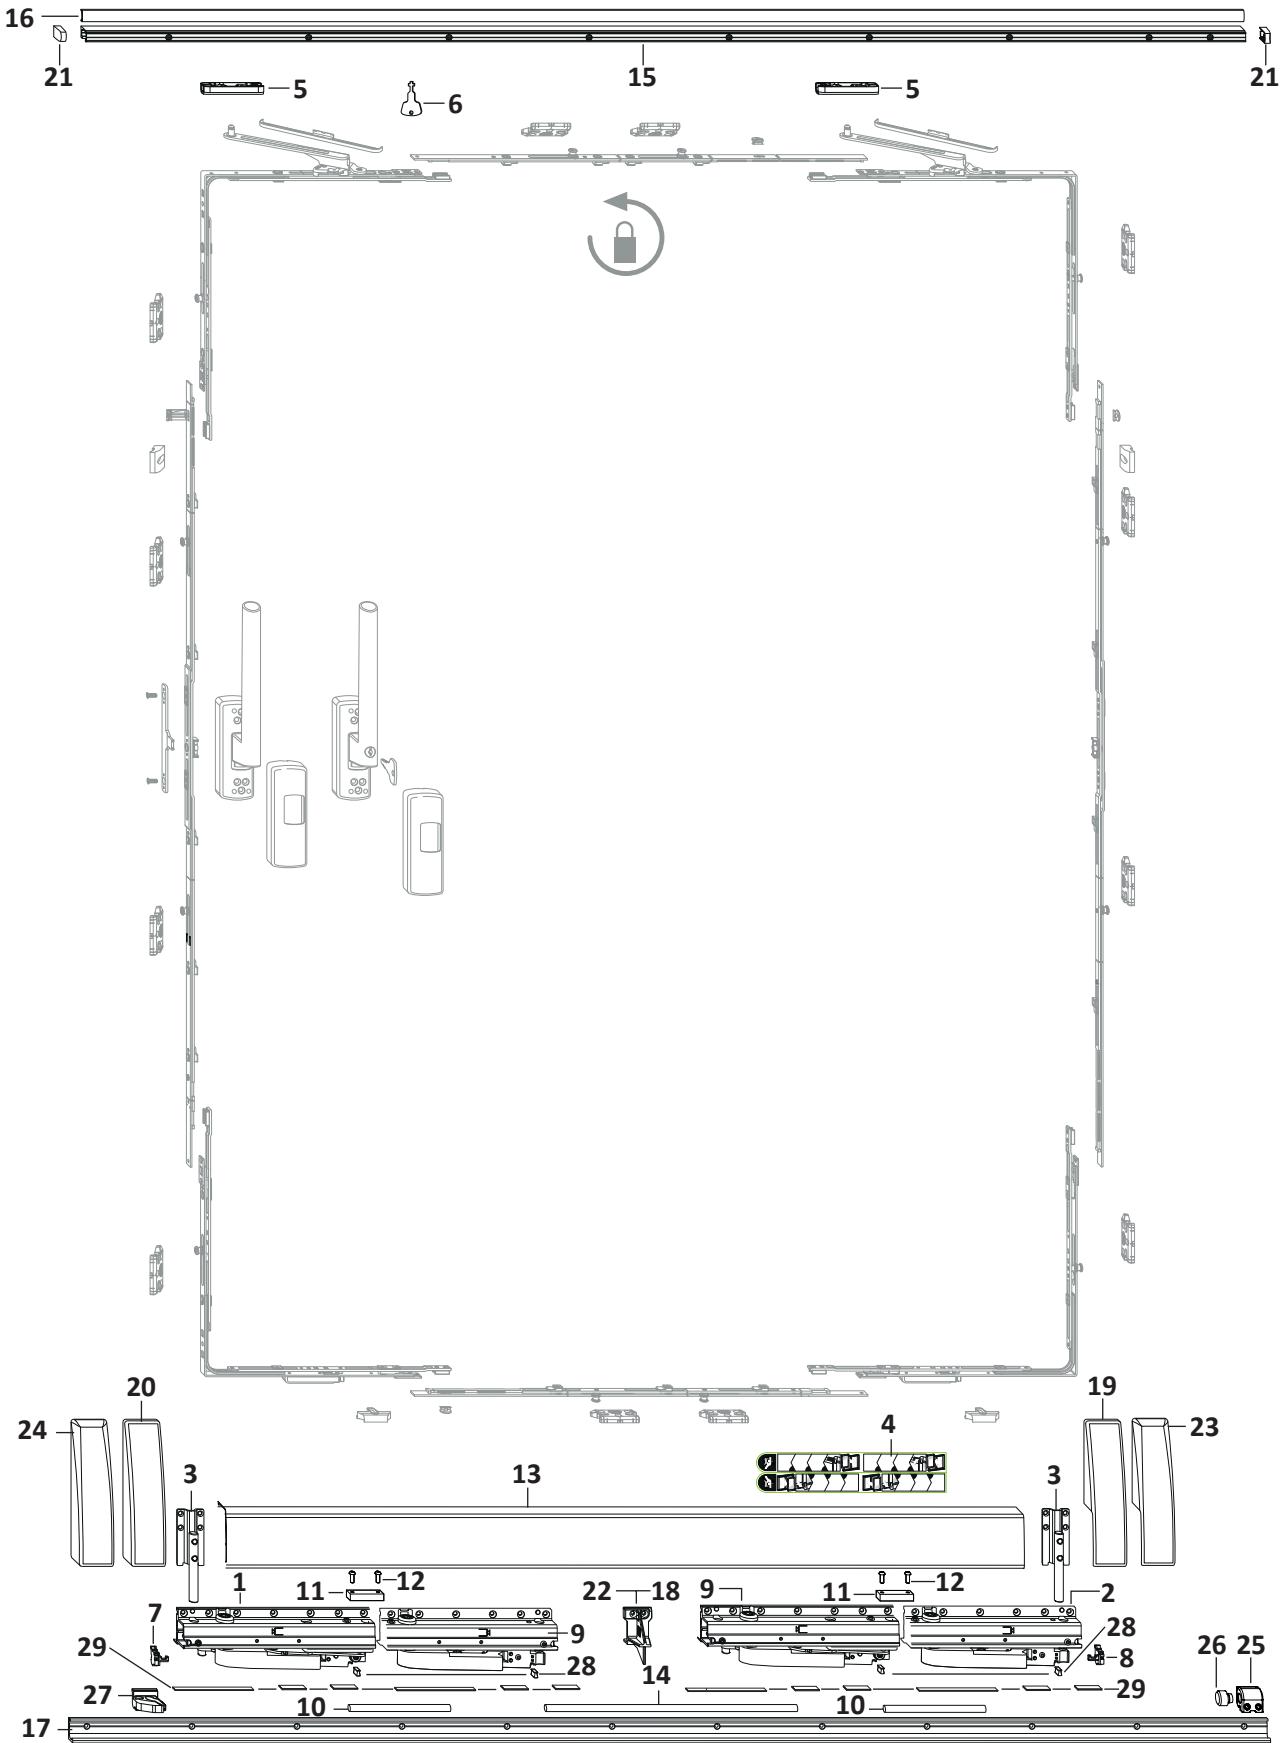

FB	sash width
FFB	sash rebate width
FH	sash height
FFH	sash rebate height
G	handle position
H	rear
L	bogie wheels
M	centre
MV	central lock
OKFF	upper edge finished floor
PZ	profile cylinder

RAH	frame height
RFB	frame rebate width
S-ES	steel-reinforced security
S-RS	steel-roller increased security
SW	wrench size
V	front
VS	locking side
VSO	locking side, top
VSU	locking side, bottom
ZV	central locking gear:

## 6 Assembly of hardware components

### 6.1 Installation of the running rail and guiding rail

A	guiding rail
B	running rail

Position the guiding rail.

Observe the construction drawing related to the profile.

The screws must be screwed to be flush with the running rail. A projection is not permissible.

#### DANGER

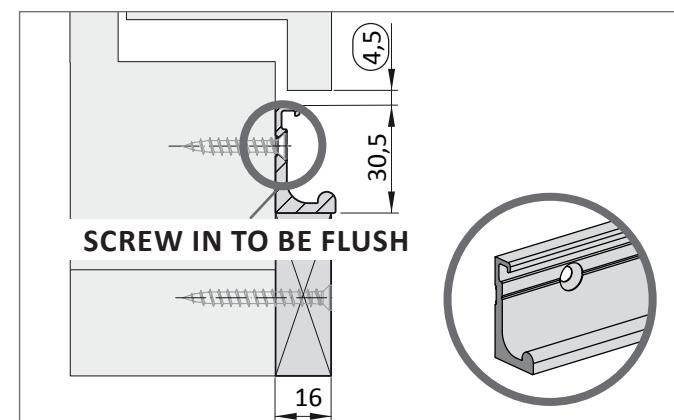

**Danger to life due to sliding sashes falling out.**

Wrong position of the guiding and running rail.

- Adhere to the positioning dimensions.

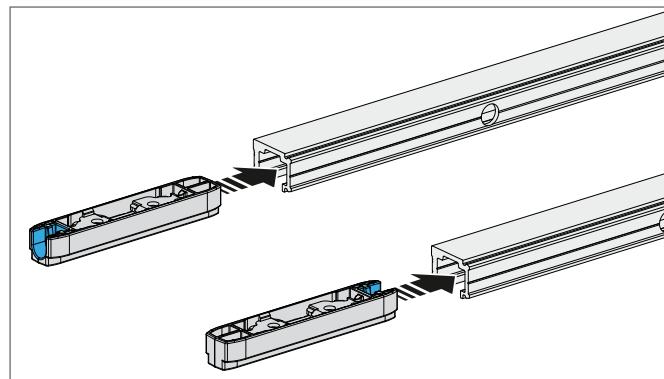

The construction drawing related to the profile must be observed for correct assembly of the guiding and running rail.

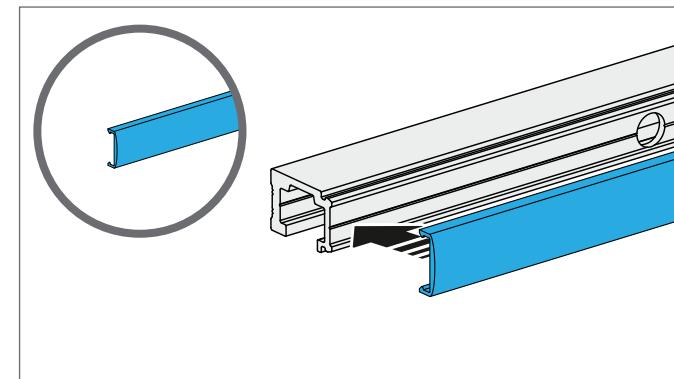

Position the running rail. Observe the construction drawing related to the profile.

Attach load-bearing, end-to-end running rail support when assembling the hardware.

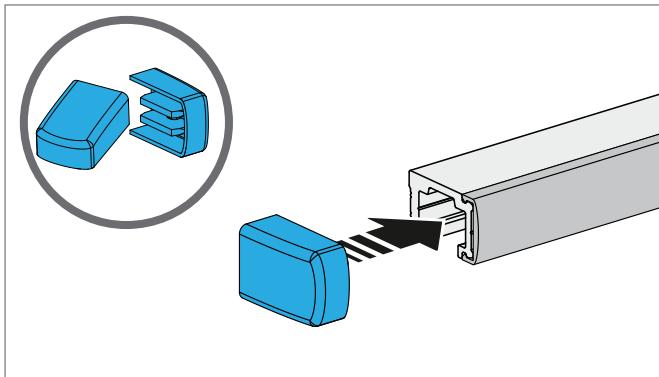

The screws must be screwed to be flush with the running rail. A projection is not permissible.

Push both sliders into the guiding rail.

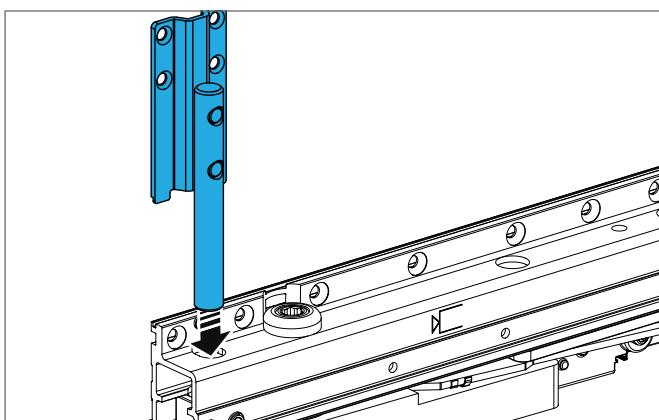

Shorten the cover rail F to the required length and clip onto the guiding rail.

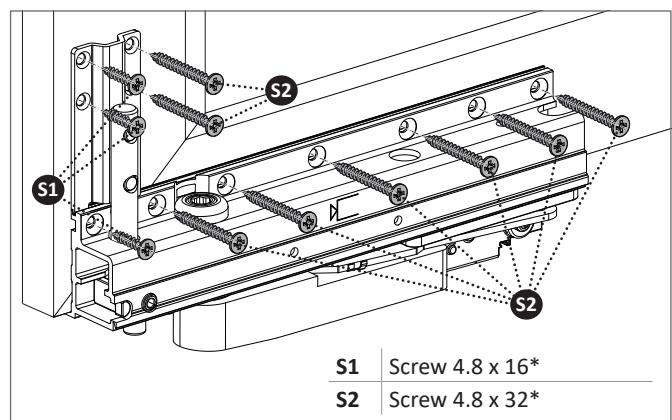

Attach a cover cap F to each end of the guiding rail.

## 6.2 Installing the bogie wheels

Push supporting part into bogie wheels V and H.

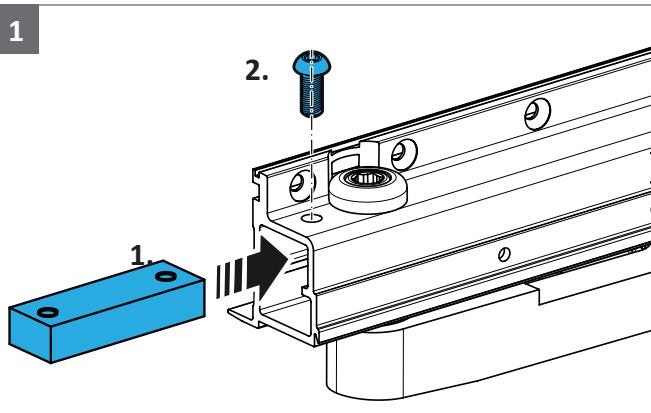

Screw both bogie wheels tightly onto sliding sash according to their position.

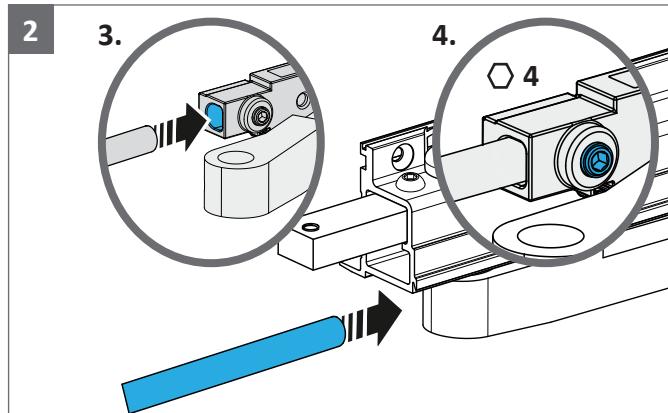

\*Screw length dependent on profile

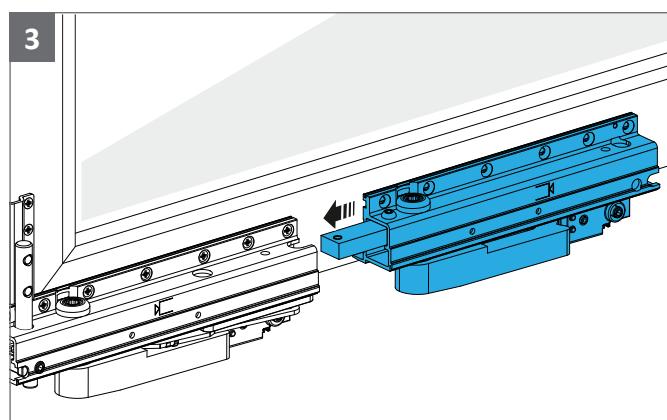

## 6.2.1 Installation of the bogie wheels M

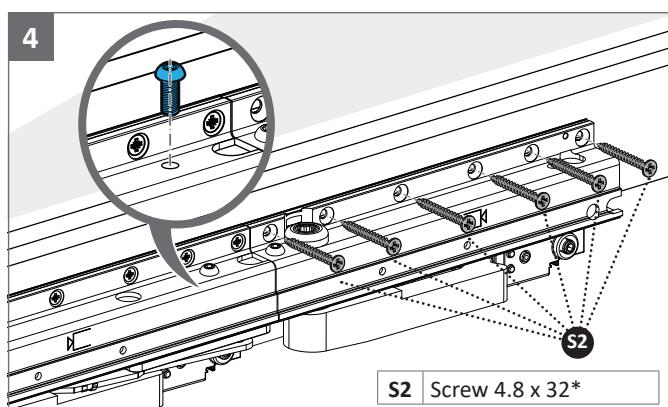

Push the connecting piece into bogie wheels M (1.) and fix with pan-head screw (2.).

Insert connecting rod M into bogie wheels M (3.) and fix with head cap screw (4.). Torque 10-11 Nm.

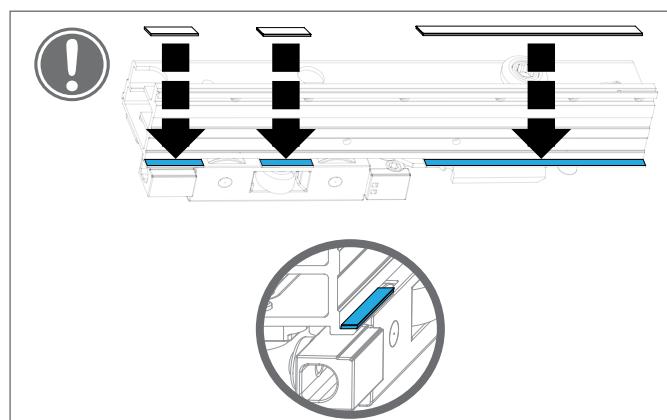

Push the respective bogie wheels M into bogie wheels V and H.

Fix bogie wheels M to bogie wheels V and H with pan-head screw.

Screw bogie wheels M tightly onto sliding sash.

\*Screw length dependent on profile

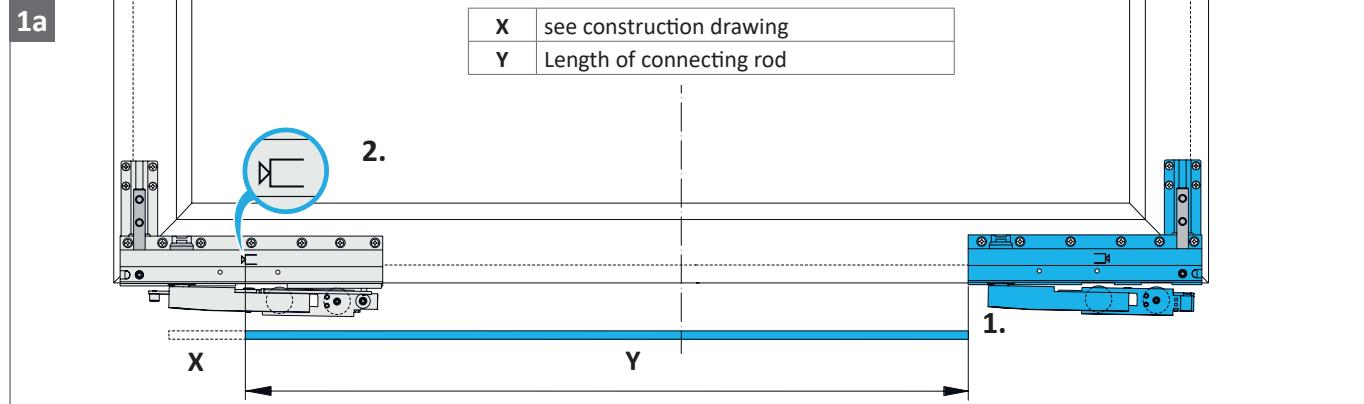

According to the profile system, the optional distance plates must be used.

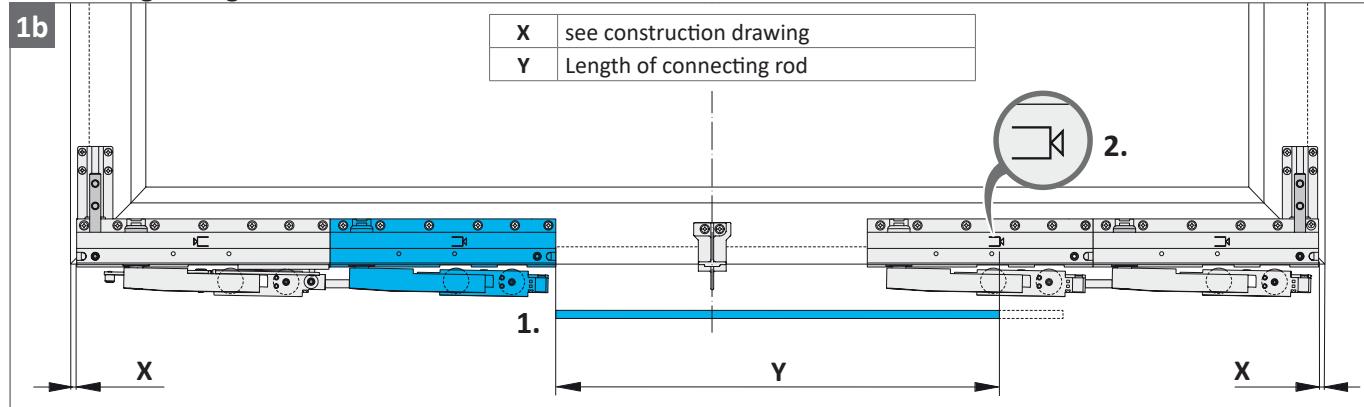

### 6.3 Installing the connecting rod

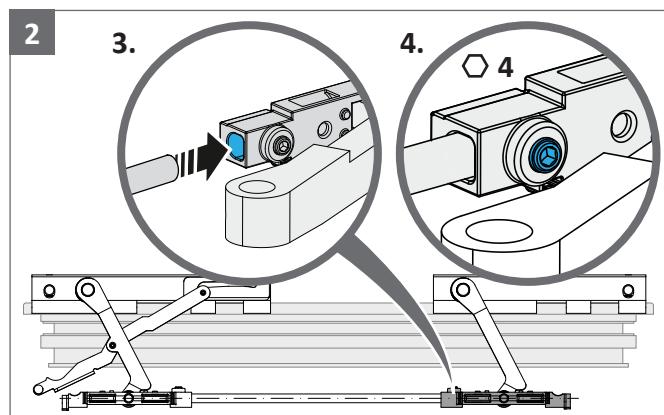

up to 160 kg sliding sash

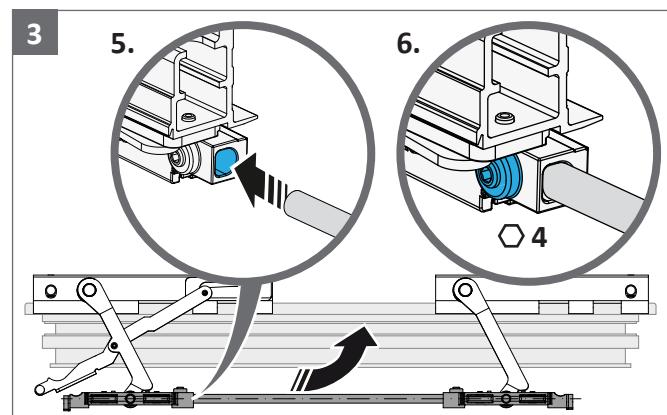

from 161 kg sliding sash

Place connecting rod on the H bogie wheels (1.). Transfer the crop indication on the cropping mark of bogie wheels V, to the connecting rod (2.) and crop the connecting rod.

Insert connecting rod into H bogie wheels (3.) and fix with head cap screw (4.). Torque 10-11 Nm.

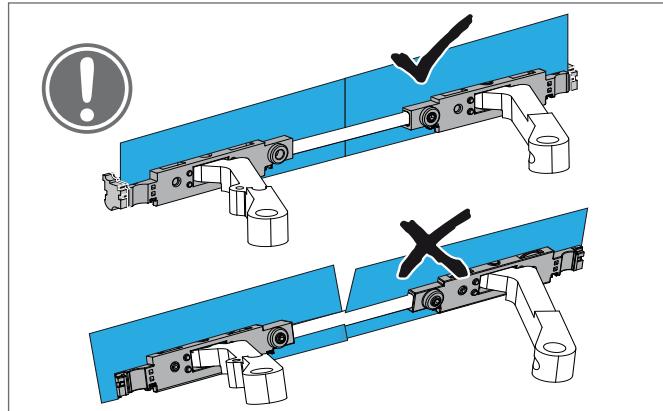

Insert connecting rod into bogie wheels (5.). Bring the bogie wheels housing with connecting rod into the closed position. Now fix the connecting rod with a head cap screw (6.). Torque 10-11 Nm.

4

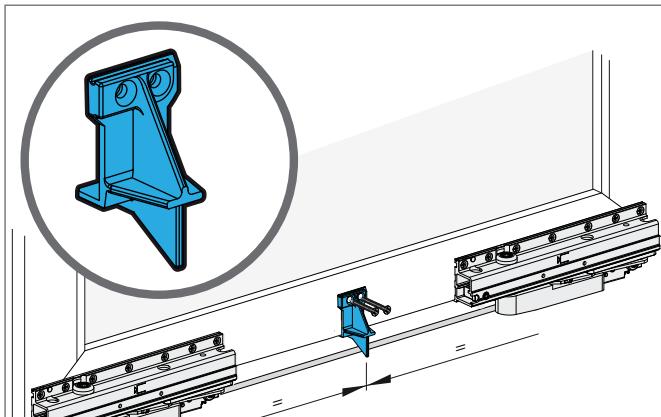

The bogie wheels housing must be standing parallel in the closed position.

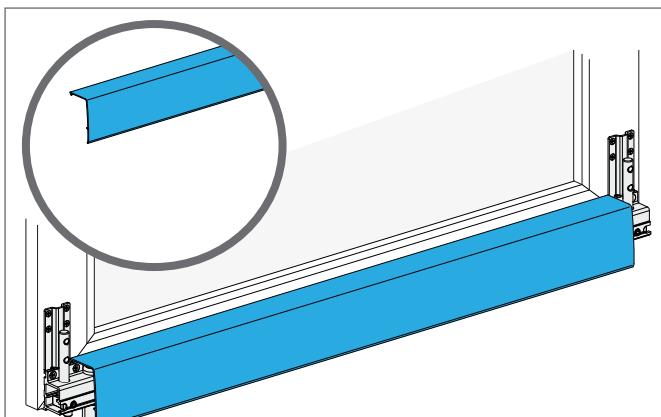

After the fixation of the connecting rod, the bogie wheels housing must align with each other.

#### 6.4 Installation of the supporting piece L

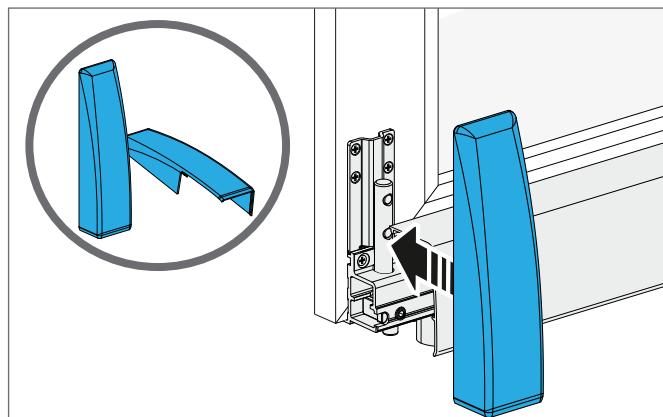

Position supporting piece L for cover rail L centrally and screw into place with 4.8 x 35 screws

#### 6.5 Mounting the bogie wheels cover

After the sliding sash has been inserted into the frame, attach the cover rail L.

Attach the cover caps L to the respective bogie wheels.

## **7 Profile sections**

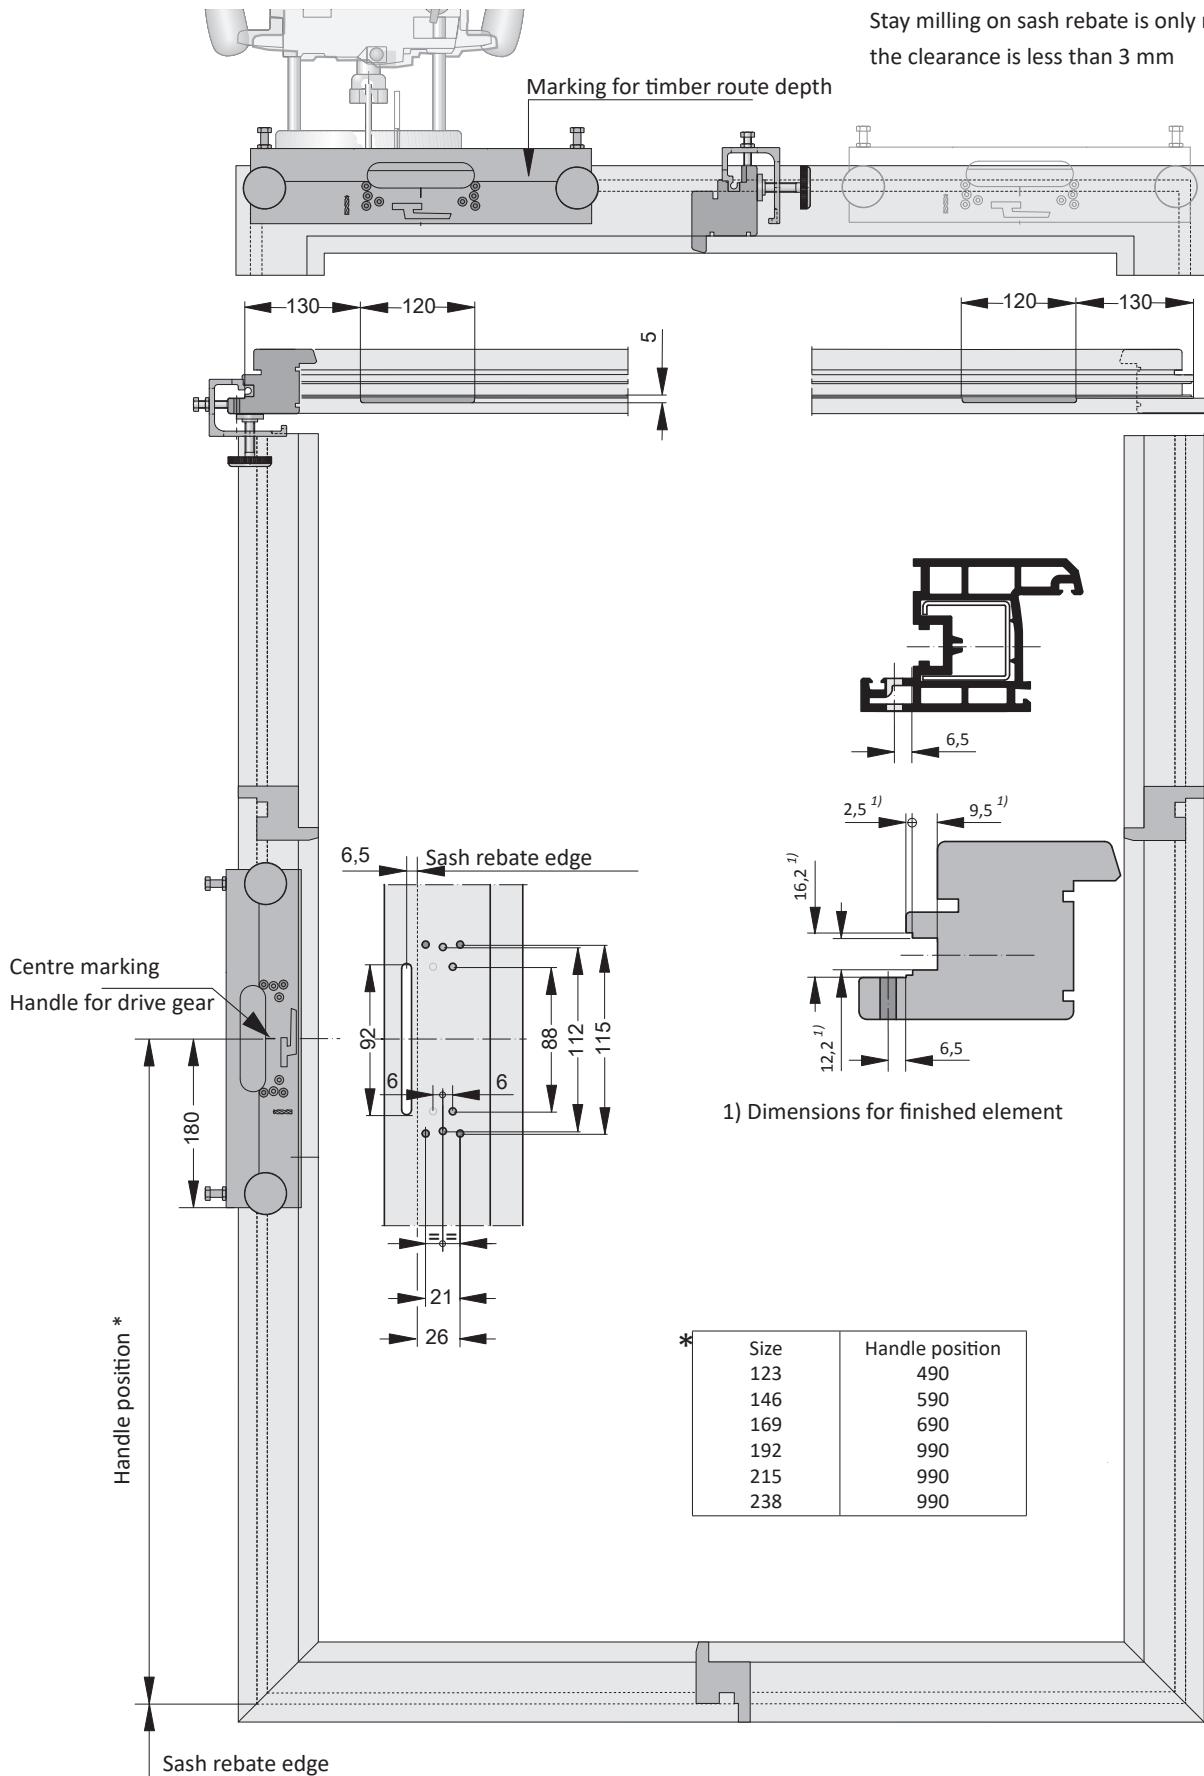

### **7.1 SI construction drawings**

The dimensions of the SI construction drawings must be observed for the correct positioning of the holes and components on the profile.

You can obtain SI construction drawings from your field sales representative on request.

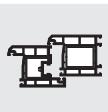

## 8 Preparation of sliding sash

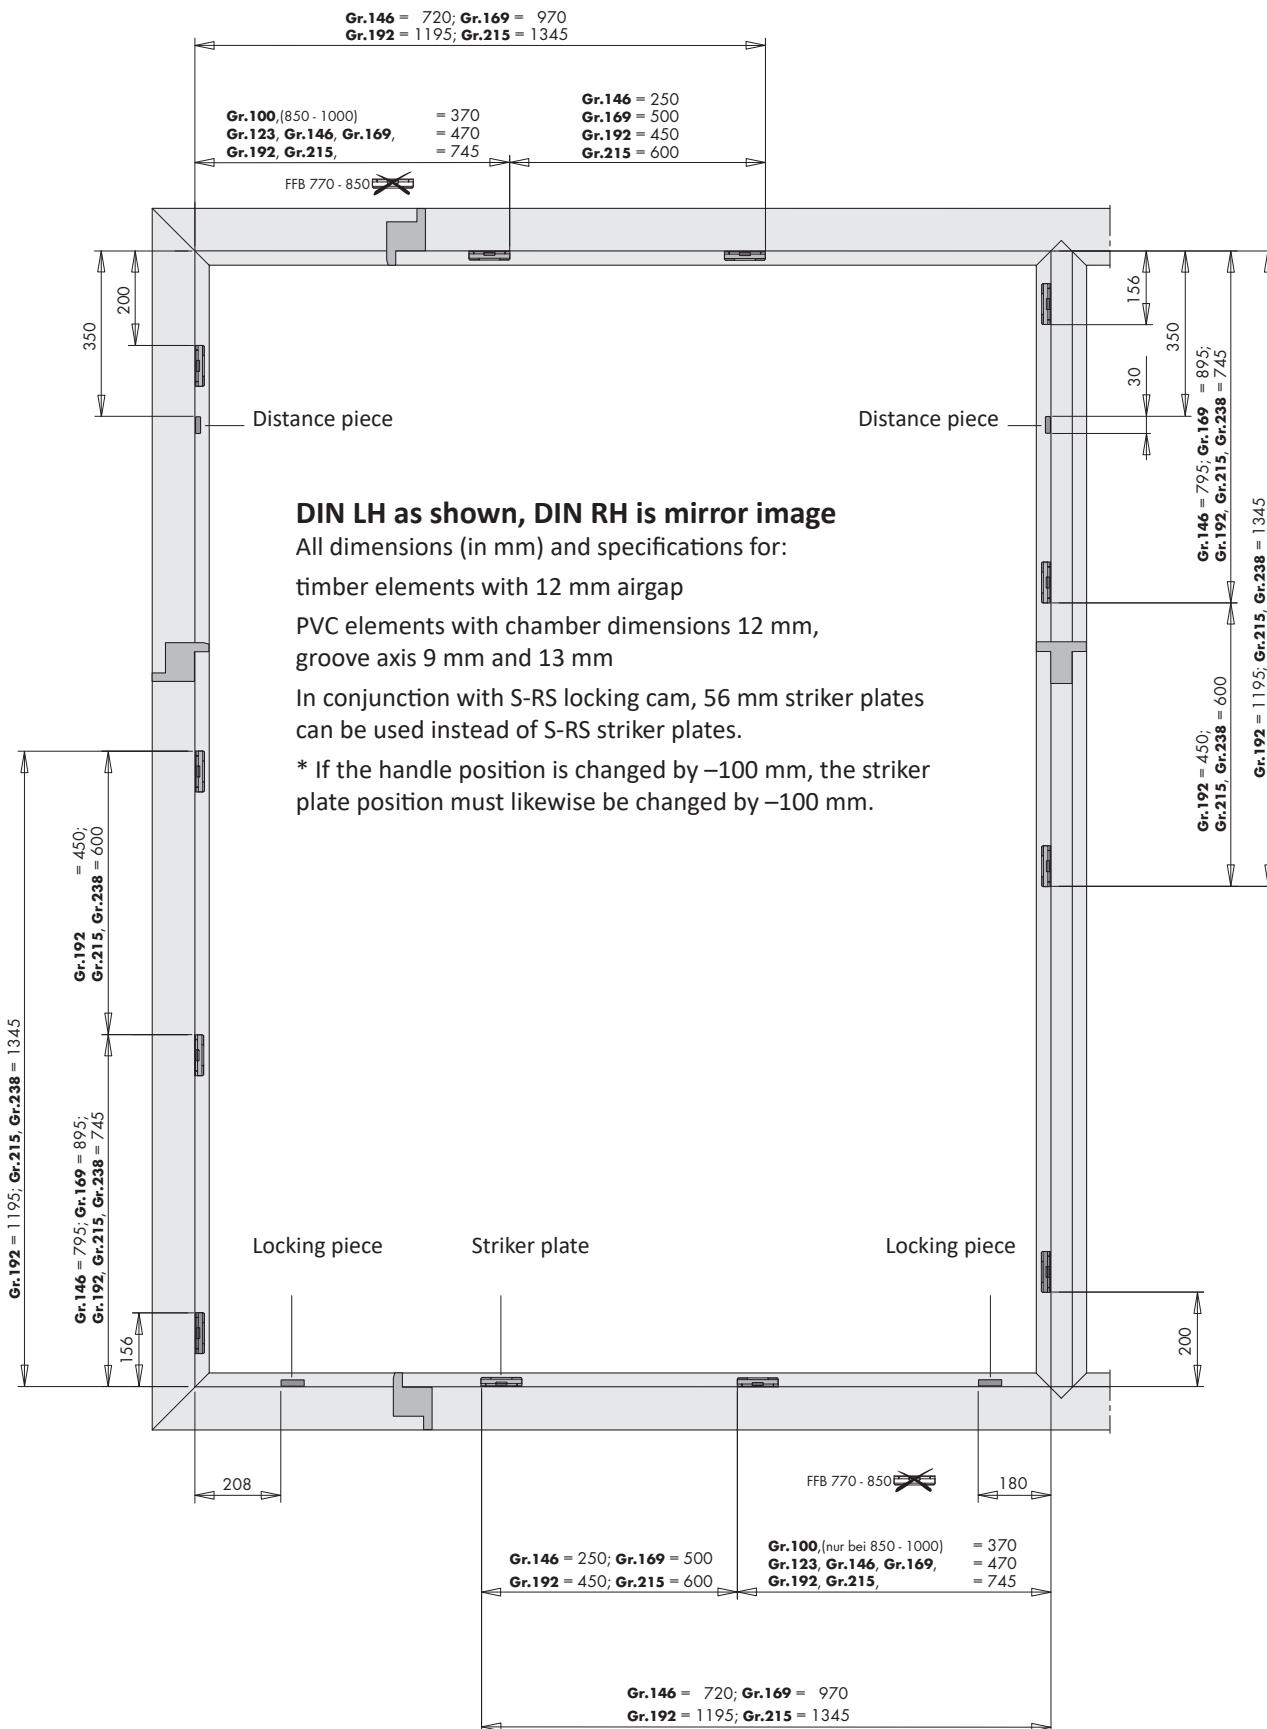

Stay milling on sash rebate is only necessary when the clearance is less than 3 mm

*	Size	Handle position
	123	490
	146	590
	169	690
	192	990
	215	990
	238	990

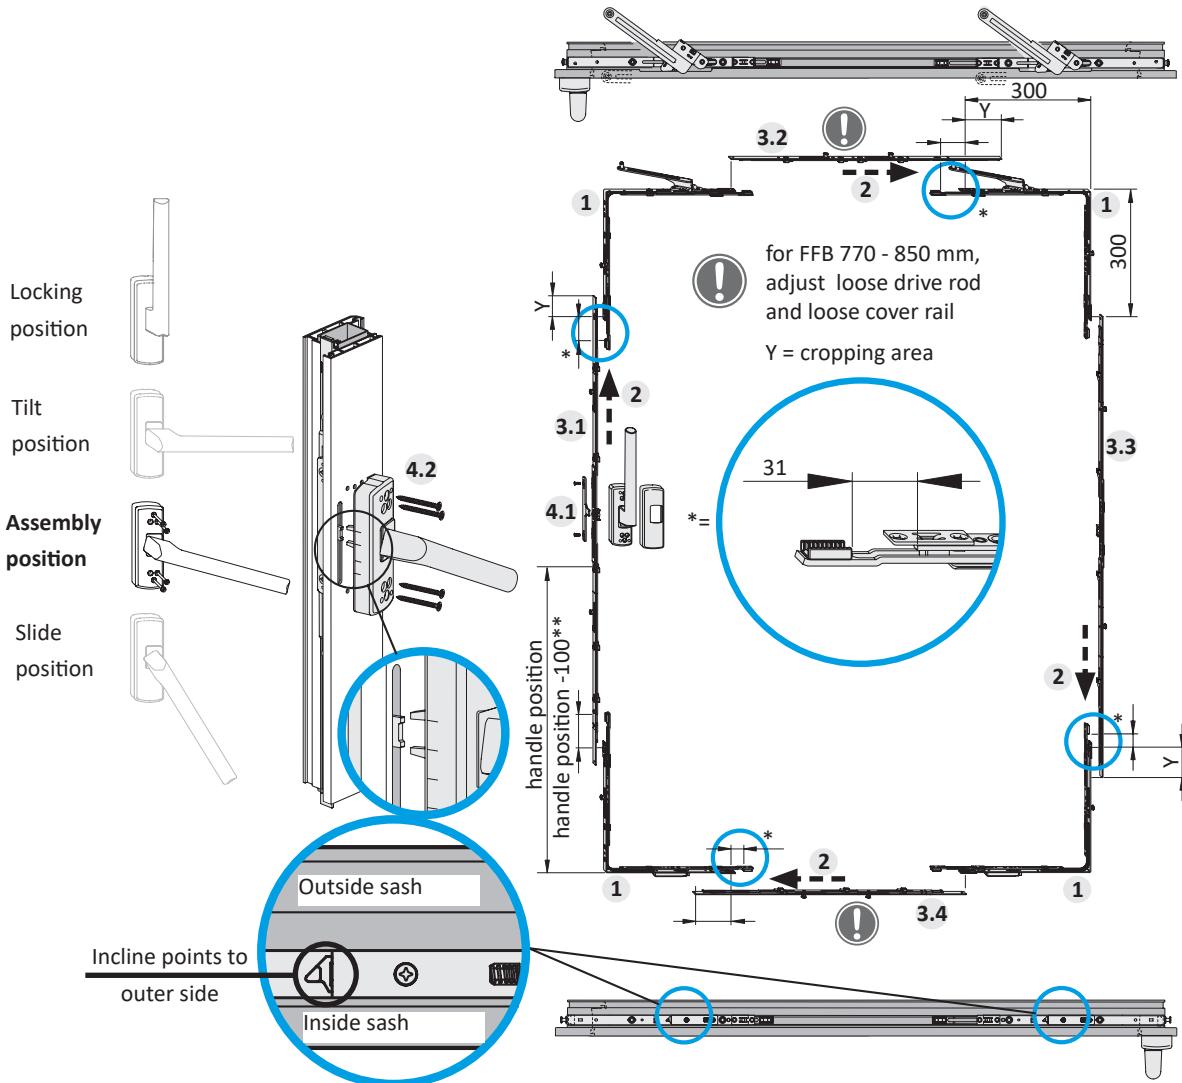

## 9 Frame part positions

## **10 Installation of central locking gear**

\*\* If the handle position is changed by -100 mm, the striker plate position must likewise be changed by -100 mm. The size range of the gear OS is also reduced by -100 mm.

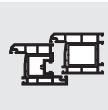

- 1 Insert corner drives VSU, BSU, VSO and BSO correctly into the eurogroove and screw into place. Release seal in the area of the stay arm.
  - 2 Push each drive rod of the corner drives into the respective installation position, as far as stop (refer to - - ►)

Insert the OS gear and the linkages in the eurogroove, mark, crop at one side and install in this sequence: begin with the OS gear (3.1) and couple the top linkage (3.2) in such a way that the stay arms of VSO and BSO tighten in parallel. On the stays, observe the marking on the cover rail (see figure). Then insert gear OS (3.3) and linkage (3.4) transversally at the bottom and screw into place.

- 4.1: engage the coupling bracket with the cam on the OS gear and screw in place with M5 x 10 countersunk screws.

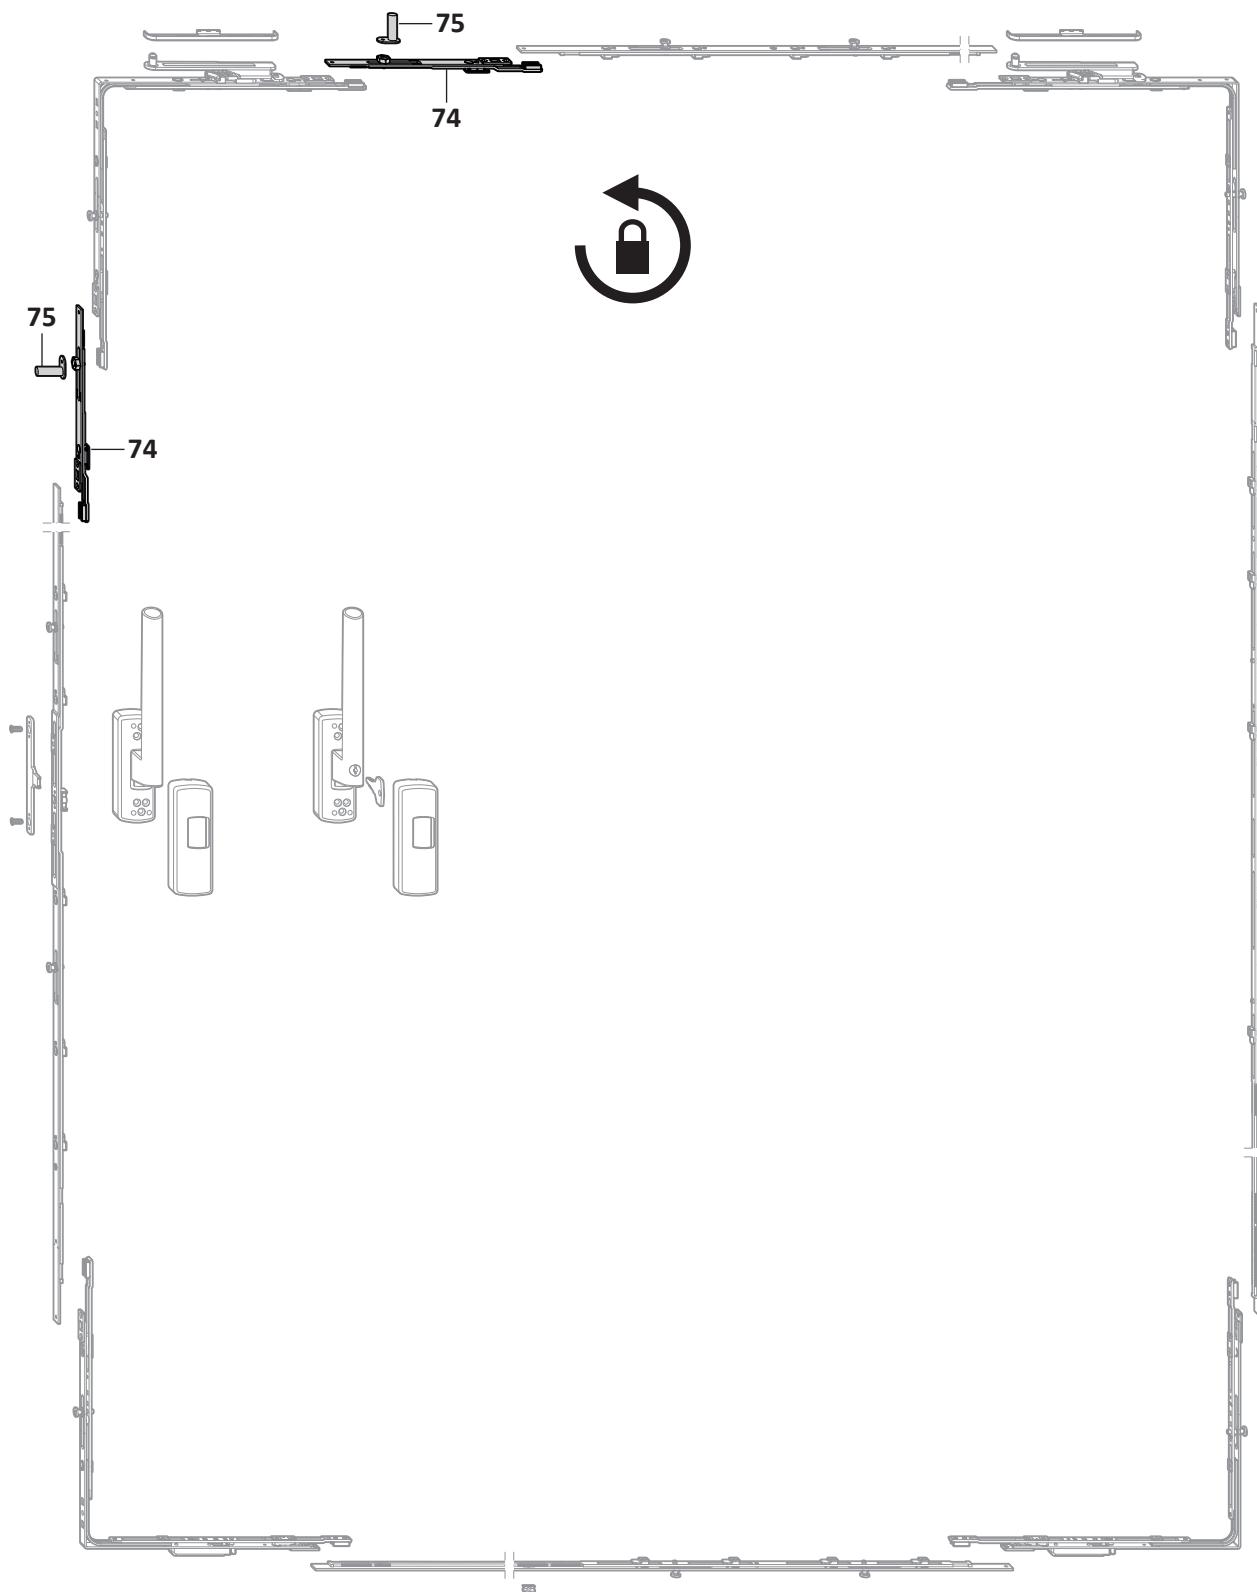

**4** 4.2: insert the PSK 200-Z/GH Si-line handle into the installation position (see figure) and screw into place with 4 screws 5x50. Place PSK 200-Z/GH Si-line handle in the locking position in order to shear the fixation of the long components.

Attach the PSK 200-Z/GH Si-line cover caps to the stay arms.

## 11 Locking monitoring system UMS

### 11.1 Possible installation positions

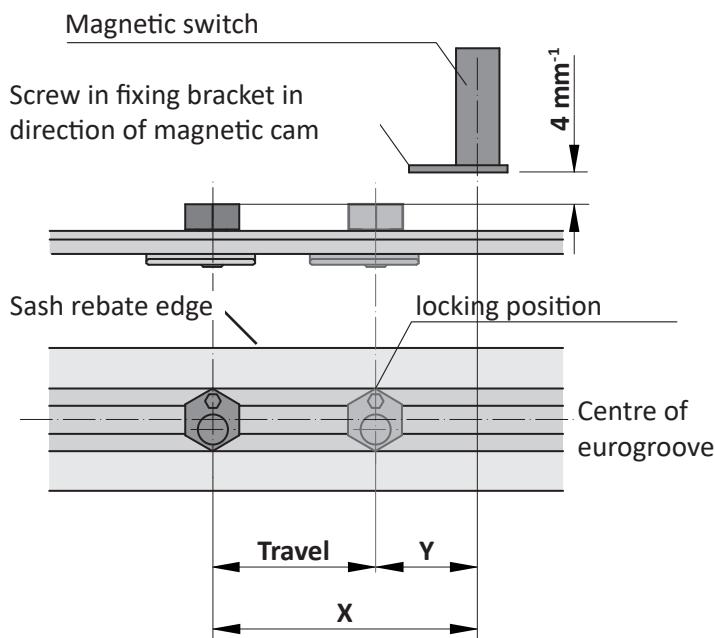

## 11.2 Hardware components locking monitoring system

Item	Material description	Material number	piece scheme	
			A	C
74	Linkage UE sz.23 MV	716519	1	2
75	Magnetic switch UMS	see product range AEROCONTROL	1	2

## 11.3 Assembly of locking monitoring system

### 11.3.1 Positioning the magnetic switch and magnetic cam

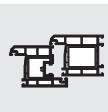

Hardware travel for calculating offset in turning position

$$\text{Offset X} = \text{travel} + Y$$

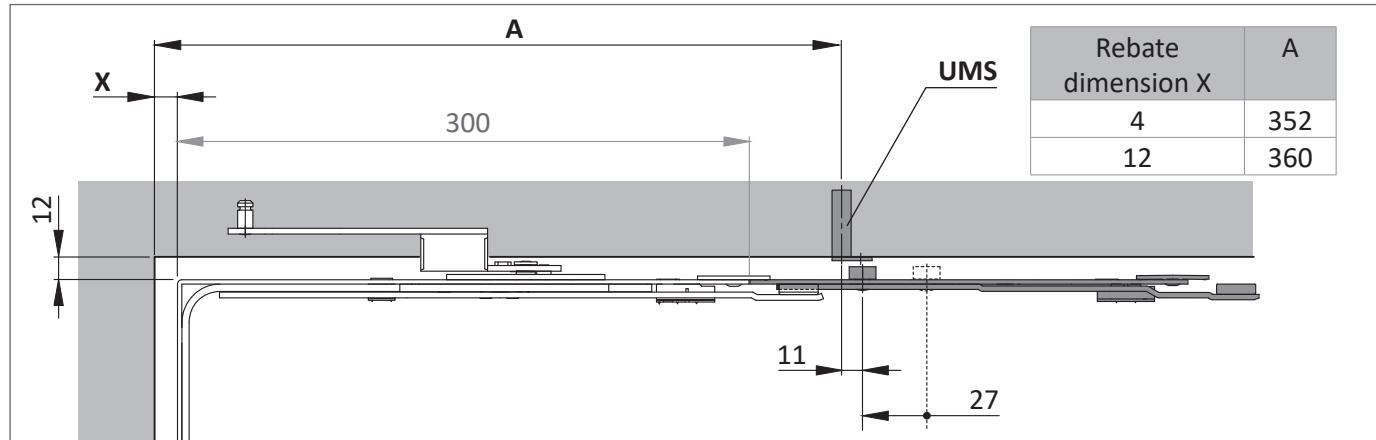

Magnetic switch distance in locking position

Magnetic switch	Dimension Y
UMS001	11 mm ± 1
UMS002	11 mm ± 1
UMS003	11 mm + 2
Hardware range	Travel
FAVORIT	16 mm
TITAN iP	18 mm
TITAN AF	18 mm
PORTAL PSK 200 Z Plus	56 mm

### 11.3.2 Assembly position – Magnetic switch types UMS:

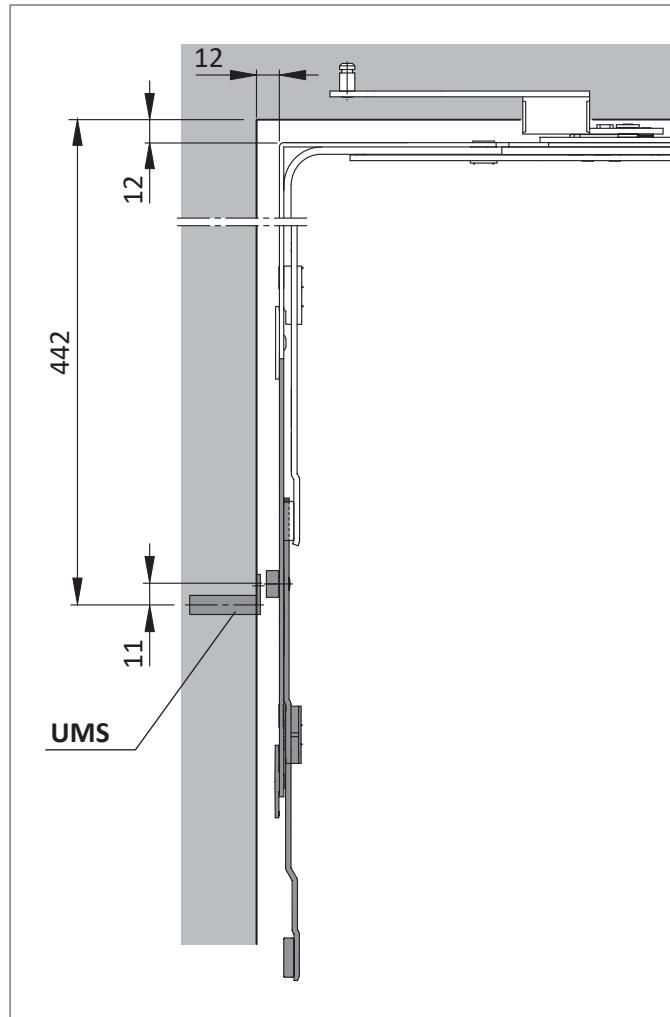

- for FFB 1000 - 2000 top horizontal installation

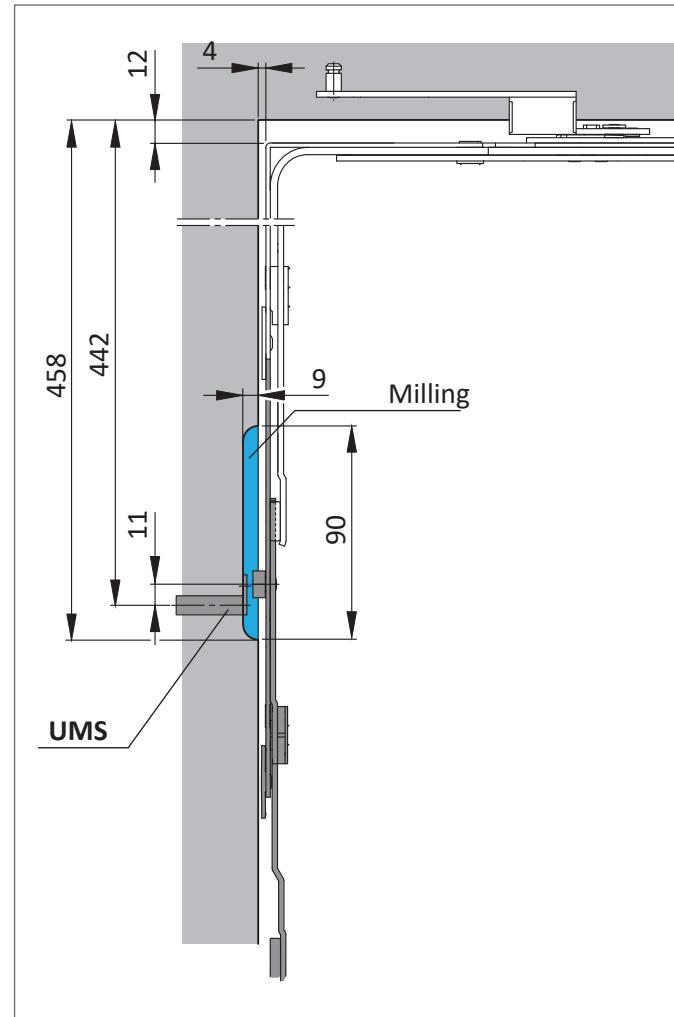

1. Release assembly fixation on linkage UE.
2. Slide magnet bolt 27 mm.
3. Couple linkage UE with the corner drive.

- for FFB 770 - 1000 – vertical installation on the locking side

Rebate dimension 12 mm

Rebate dimension 4 mm

## 12 Completion of element

### 12.1 Inserting the sliding sash into the frame

- Switch handle into sliding position. Position the window sash on the running rail at an incline and snap the coupling bolt of the stay arms into the slider.
- Check that all hardware components work. Use the adjustments if necessary. (SW 4)

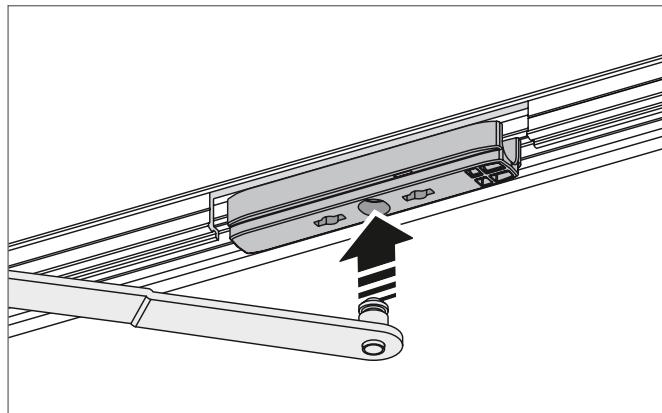

### 12.2 Insert the sliding sash and connect with frame

#### ⚠ DANGER

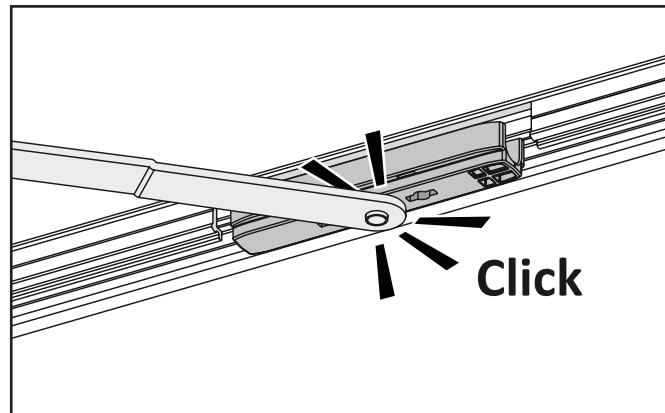

Danger to life due to sliding sashes falling out.

Stay arm has not engaged.

- Confirm that the coupling bolt is engaged in the slider by pulling on the stay arm.

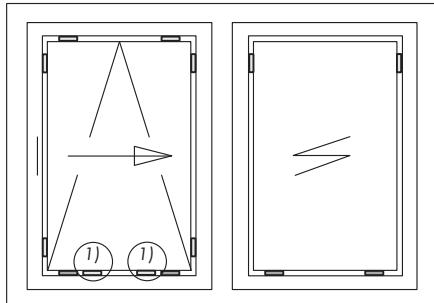

Place stay arms of tilt stay into tilt position. Position the sash on the running rail at an incline and insert the coupling bolt of the stay arms into the slider.

Snap in stay arms of tilt stay into slider. Check firm seating by pulling briefly.

### 12.3 Notes for block setting the bogie wheels M

- Use elastic distance block<sup>1)</sup> (hardness approx. 60-80 Shore), e.g. Universal block from Gluske in the M bogie wheels area.

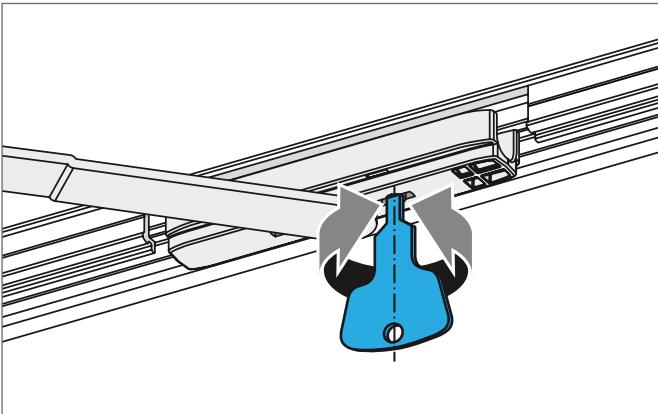

■ Bearing blocks  
■ Distance blocks

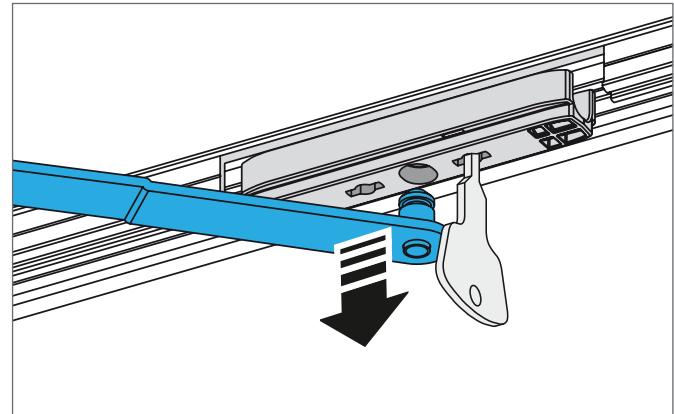

## 12.4 Releasing and removing the sliding sash from the frame

Only the PORTAL key may be used to release the stay arms in the slider, if other tools are used, there is a danger of damaging the slider.

Place stay arms of tilt stay into tilt position. Release stay arms from the slider using the PORTAL key.

Lift off the stay arms.

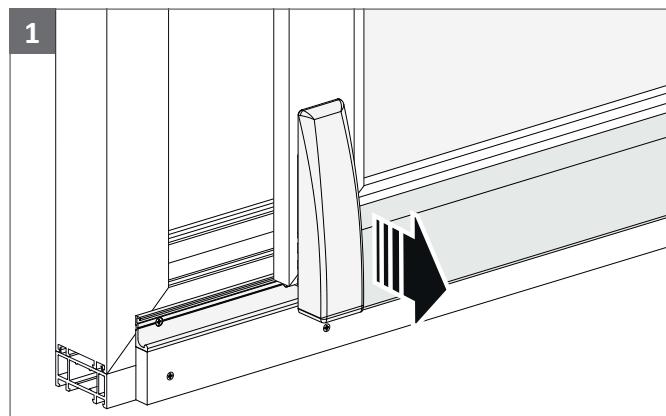

## 12.5 Installing the bogie wheels safeguards

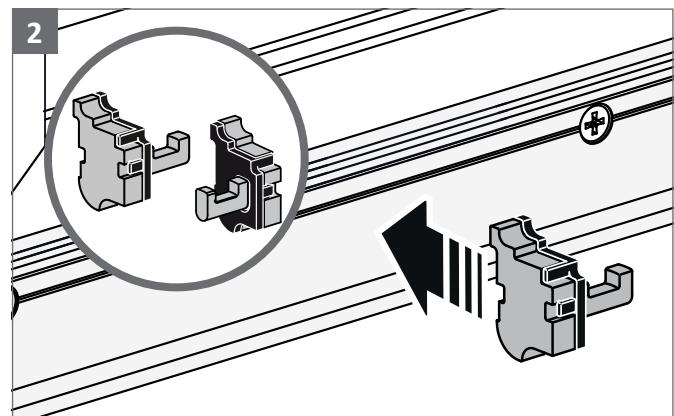

**Danger to life due to sliding sashes falling out.**

Not mounted bogie wheels safeguards.

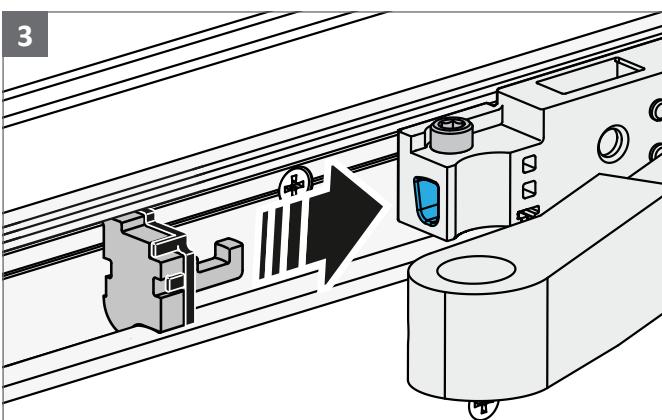

- The bogie wheels safeguards must be correctly installed in both bogie wheels of a sliding sash.

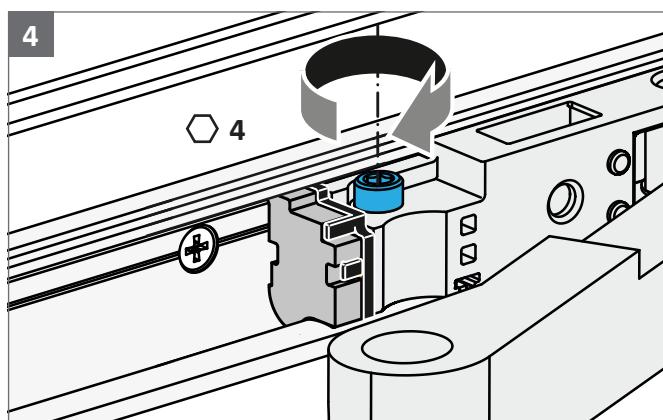

The bogie wheels safeguards can only be installed in a parallel positioned sash.

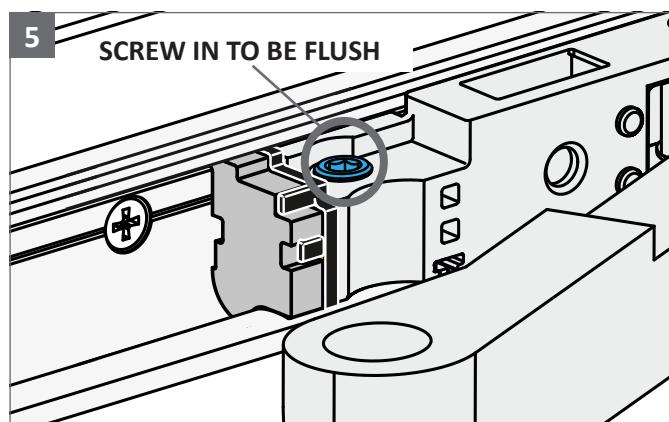

Position the relevant version (RH or LH) of the bogie wheels safeguards in the running rail.

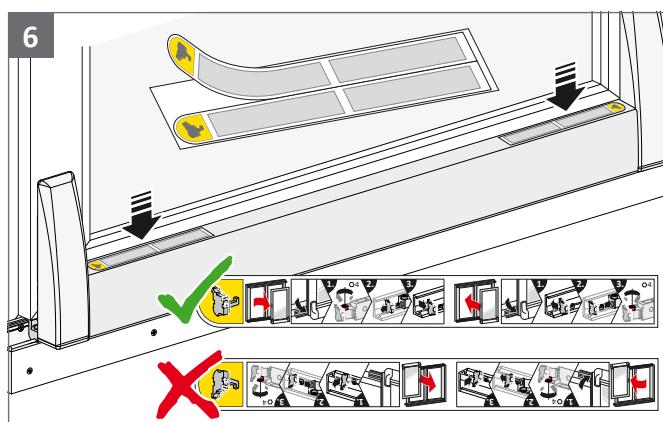

Push bogie wheels safeguards into bogie wheels V and H.

Fix the bogie wheels safeguards in the bogie wheels with a locking screw.

The locking screw must be completely countersunk. Do not overtighten the locking screw, torque max. 3 Nm.

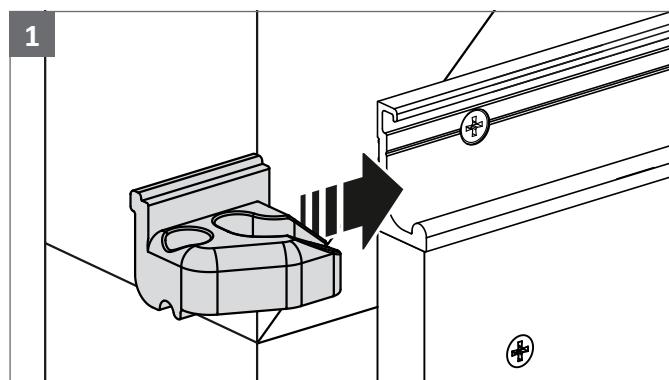

Glue the notes sticker to the protective foil of the cover rail L. Pay attention to correct adjustment of the sticker.

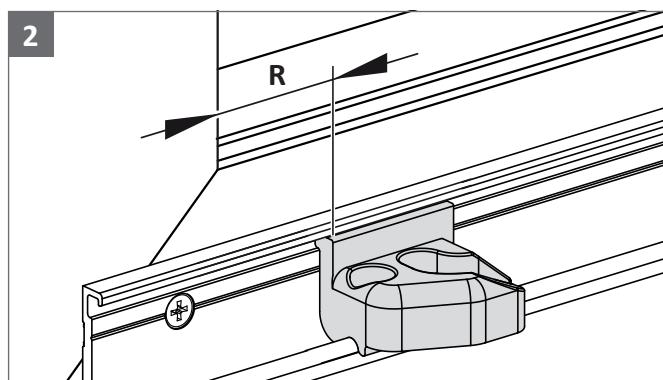

## 12.6 Removing the bogie wheels safeguards

The removal of the bogie wheels safeguards is carried out in reverse sequence to the installation.

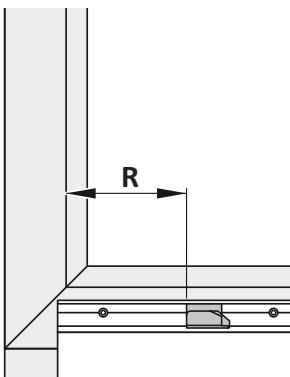

## 12.7 Positioning the trigger

Slide the trigger sideways into the running rail.

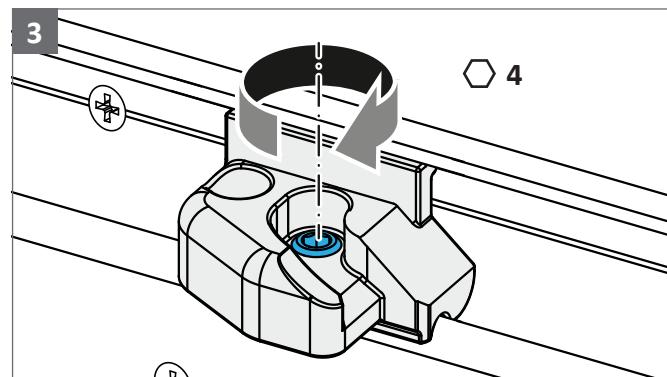

Position the trigger according to the profile.

Rebate width	R
18	16
19	15
20	14
21	13
22	12

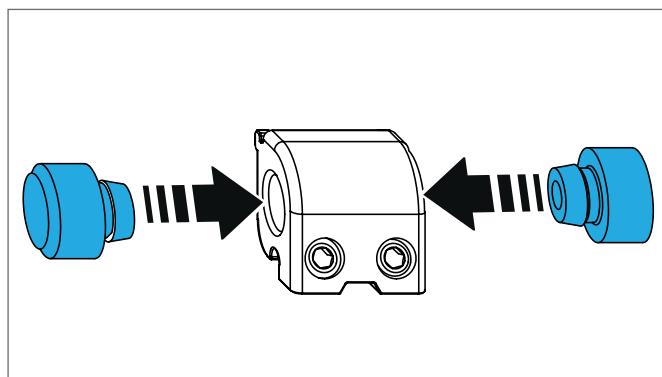

Dimension R is designed to the position of bogie wheels V.

If the position of bogie wheels V is changed, the position of the trigger must be adapted accordingly.

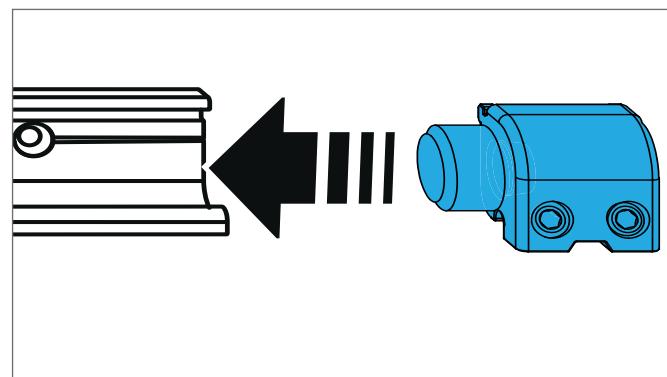

Fix trigger position with head cap screw. Torque max. 3 Nm.

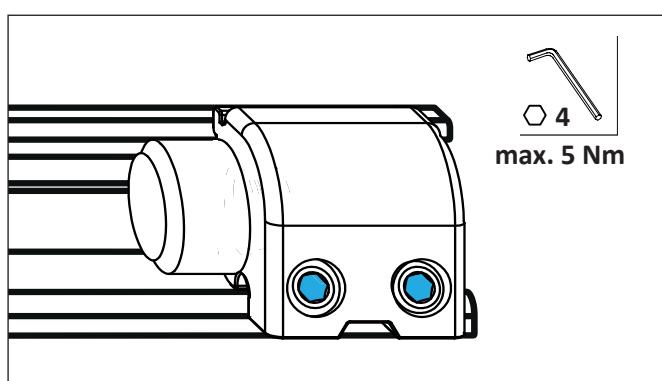

## 12.8 Positioning the stop

Assemble the stop according to the required DIN direction.

Slide the stop sideways into the running rail.

Fix stop into the running rail with Allen key SW 4. Final positioning only after the sliding sash has been installed. Torque max. 5 Nm. The screws must be fixed at alternating sides to obtain an even torque.

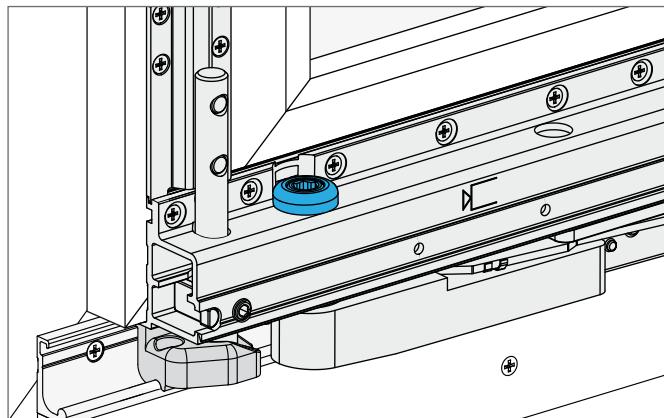

## 13 Adjustment

### 13.1 Elevating adjustment of the bogie wheels

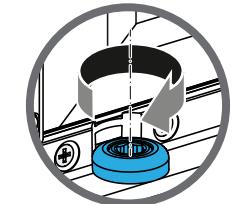

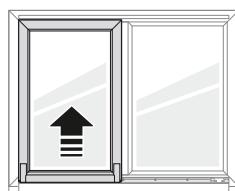

Precision adjustment of the sash to the frame can be accomplished with the elevating adjustment of bogie wheels V and H.

- ! Carry out adjustment following installation of the element in the object. Always adjust both bogie wheels.

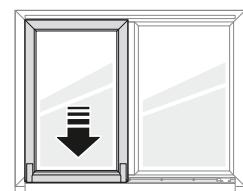

Elevating adjustment on the bogie wheels with Allen key SW 8.

Default setting in minimum position (0 mm)

◇ 8

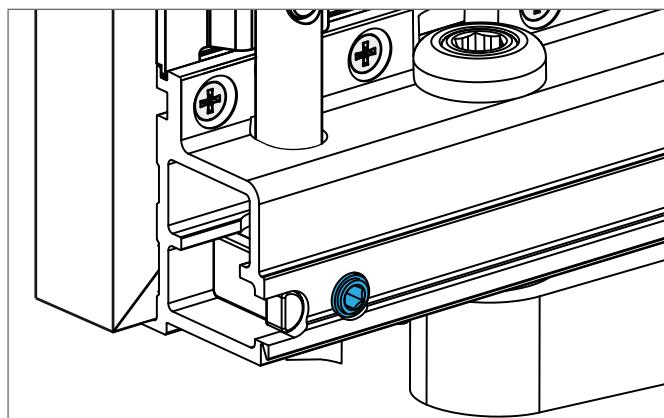

The maximum adjustment range must not be exceeded. One rotation is equivalent to 1 mm height adjustment.  
Maximum adjustment: 4 mm

### 13.2 Adjustment of the tilt angle of the bogie wheels

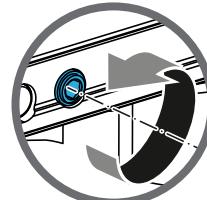

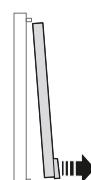

Precision adjustment of the sash to the frame can be accomplished with the tilt adjustment of bogie wheels V and H.

- ! Carry out adjustment following installation of the element in the object. Always adjust both bogie wheels.

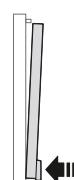

Tilt adjustment on the bogie wheels with Allen key SW 4.

Default setting in minimum position (0 mm).

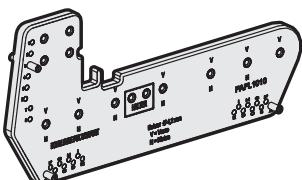

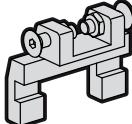

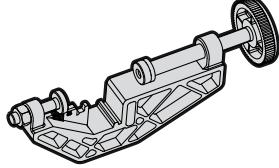

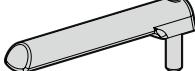

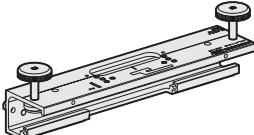

◇ 4

Adjustment track max. 2 rotations from minimum position.
